TAKE A LOOK AT THE COMPANY

MORE THAN 40 YEARS OF INTERIORS

Our story begins in the 1980s, in the southern coast of Sicily, Italy, where we are still working and breathing the scent of the sea. In those days, the leading head of Naval Interior family was a wood artisan who decided to expand his business in the naval sector and started operating also as a furniture installer aboard luxury boats.

Today we are one of the greatest companies in southern Italy to work in prestigious shipyards (Carnival Cruise's, Costa's, Princess Cruise's, Holland American's..) and residential projects.. We are a team of project managers, engineers and manufacturers. We are digital artisans able at combining manual labor with new technologies, bringing new life and energy to the naval interior design sector and to the luxury yachts furnishings worldwide. Many years of experience alongside shipbuilders and shipowners have allowed us to gain and reinforce our building and assembly skills in the naval design sector. Over the years we have been integrating our artisanal know-how with new technologies and manufacturing equipment, such as optical fiber 2D laser cut. Today we are experiencing a full industrial 4.0 revolution, letting designers and workers, engineers and artisans to work closely to fully ensure the permeation and the coexistence of creative, engineering and manual skills.

A strong coordination channel ensures the enhancement of human resources, the synergy among associates, the attentive assessment and selection of outsourcing suppliers and the perfect balance between all the organizational aspects.

READ MORE

- Complete supply chain: project management, production and outfitting.
- Own furniture manufacturing.
- Care for details drawn from the history of our italian wood artisans.
- Working and delivery time optimization, ensured by the use of the most advanced 4.0 technologies.
